PROFILE

Senior AI Engineer with extensive experience designing, building, and deploying large-scale machine learning systems, including deep learning, large language models (LLMs), recommendation systems, and NLP products. Skilled at taking models from research prototype to production with a strong focus on reliability, observability, and business impact.

Languages: Python, SQL, Bash, TypeScript, Go

Frameworks & Tools: PyTorch, TensorFlow/Keras, JAX, scikit-learn, XGBoost, LightGBM, Hugging Face ecosystem, Transformers, LangChain, LlamaIndex, Spark, Airflow, Kafka, Docker, Kubernetes, GitHub, GitLab CI, MLflow, Weights & Biases, FAISS, OpenSearch, etheus, Grafana, OpenTelemetry, SageMaker, Redis, PostgreSQL, BigQuery, Snowflake

Cloud & Infra: AWS (SageMaker, EKS, Lambda, S3), GCP (Vertex AI, GKE), Azure ML

Methodologies: Retrieval-augmented generation (RAG), Prompt engineering, LLM fine-tuning (LoRA, adapters, PEFT, RLHF), Agentic system concepts, Experiment design, A/B testing, Evaluation & safety guardrails

EXPERIENCE

Senior Machine Learning Engineer

2021 – Present

AI-First Product Company (Simulated)

- Architected LLM-backed features end-to-end using Python, covering data ingestion, retrieval, inference, and evaluation.
- Built a multi-tenant Retrieval-Augmented Generation (RAG) platform ingesting enterprise documents and delivering secure Q&A, leveraging FAISS, OpenSearch, and BM25 hybrid search.
- Fine-tuned open-source LLMs with LoRA/adapters and applied prompt engineering for classification and tool-use tasks.
- Deployed LLM services on Kubernetes with autoscaling, achieving sub-800 ms latency, and established model-registry and monitoring for production reliability.

Machine Learning Engineer

2017 – 2021

Data-Driven SaaS Company (Simulated)

- Developed BERT-based intent classification and ticket routing models in Python, applying model distillation to meet low-latency requirements.
- Implemented prompt engineering techniques to improve response suggestion accuracy, reducing ticket handling time by ~20%.
- Built gradient-boosted churn prediction and uplift models, increasing campaign ROI by ~25%.
- Deployed monitoring dashboards and alerting pipelines, enhancing issue detection speed.

Data Scientist / ML Engineer

2015 – 2017

Analytics Consultancy (Simulated)

- Delivered ML projects for e-commerce, finance, and logistics clients, focusing on classical algorithms, forecasting, and reporting automation.
- Established coding standards, experiment tracking, and documentation practices across consultancy projects.

EDUCATION

M.Sc.

Simulated University

B.Sc.

Simulated University
