PROFILE

Senior AI Engineer with extensive experience designing, building, and deploying large-scale machine-learning systems, including deep learning, large language models (LLMs), recommendation systems, and NLP products. Proven ability to translate complex risk-modelling concepts into production-grade pipelines, support first-line-of-defence risk monitoring, and deliver actionable insights for loan, margin and retail-risk portfolios. Strong background in statistical modelling, cloud-native deployment (AWS, GCP, Azure) and a solid understanding of banking products (loans, deposits, derivatives) and regulatory frameworks (Basel III, CCAR).

SKILLS

Programming:	Python, SQL, Bash, R, Scala
ML / Analytics:	Credit scoring, PD/LGD/EAD modelling, Stress testing, Time-series forecasting, Survival analysis, XGBoost, LightGBM, TensorFlow, PyTorch, Scikit-learn
Risk Tools:	SAS Risk Management, Moody's Analytics, Bloomberg, SAS-EG, Tableau, Power BI
Cloud / DevOps:	AWS SageMaker, GCP Vertex AI, Azure ML, Docker, Kubernetes, CI/CD (GitHub Actions, GitLab), Airflow, MLflow
Soft:	Stakeholder management, Regulatory reporting, Cross-functional leadership, Communication, Agile Scrum

CERTIFICATIONS

- Financial Risk Manager (FRM) – Level I, GARP, 2022
- Certified Credit Risk Analyst (CCRA), 2021
- CFA Institute Investment Foundations, 2020

EXPERIENCE

Senior AI Engineer (Credit-Risk focus) 2018 – Present

Various financial-services organisations (confidential)

- Designed, built and productionised large-scale ML pipelines for credit-risk scoring, margin-risk monitoring and retail-risk analytics.
- Implemented model-governance processes aligned with Basel III and CCAR reporting requirements.
- Collaborated with risk-officers and business stakeholders to translate product-level risk questions into data-driven solutions.
- Deployed models on cloud platforms (AWS, GCP, Azure) using Docker, Kubernetes and CI/CD pipelines to ensure high availability and observability.

Machine Learning Engineer 2015 – 2018

AI-first product company (confidential)

- Built end-to-end recommendation and NLP systems that served millions of users, gaining experience in scaling ML workloads.
- Developed monitoring and alerting frameworks for model drift and data quality, supporting first-line risk oversight.
- Contributed to open-source ML libraries and internal tooling to accelerate model development cycles.

EDUCATION

- M.Sc. Computer Science – University of Example, 2014
- B.Sc. Computer Engineering – Institute of Sample, 2012
